Education

University of Ottawa Ottawa, ON
B.Sc. Computer Science (Honours, Co-op) – Dean's List, CGPA: 7.96/10 *2023 – 2027*
Relevant Coursework: Data Structures and Algorithms, Operating Systems, Databases, Computer Architecture

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS
Frameworks/Libraries: React, Node.js, Express, Flask, scikit-learn, Pandas, NumPy, Tailwind
Databases/Platforms: PostgreSQL, Firebase, Azure DevOps, Dataverse, SharePoint, Power Platform
Developer Tools: Git, REST APIs, OData, Postman

Experience

Software Engineer / Data Engineer Co-op May 2026 – Present
Department of National Defence *Ottawa, ON*
- Led the migration of service intake data across SharePoint, reconciling request records, approval metadata, statuses, and attachments with **zero data loss** while eliminating **$6,000+ in recurring annual licensing costs**.
- Built executive Power BI dashboards by integrating Azure DevOps OData and SharePoint data, surfacing project delivery, work-item status, spending, risks, and initiative performance for project leadership.
- Automated the generation of Azure DevOps work items from sprint, meeting, and initiative data, reducing manual reporting cleanup and improving visibility into team capacity across active projects.

Automation Developer Co-op Jan. 2026 – Apr. 2026
Department of National Defence *Ottawa, ON*
- Built an end-to-end digital service intake and approval workflow that captured requests, automated approval routing, synchronized request statuses, and reduced manual handoffs between business and technical teams.
- Built a pull request review automation using the **Azure DevOps REST API** and Microsoft Teams notifications, implementing duplicate-alert prevention and reducing PR review response time by **80%**.
- Developed an **LLM-powered document-processing pipeline** that parsed government filings, extracted structured data, validated outputs, and automated routing to streamline internal review workflows.

Full Stack Developer Dec. 2024 – Feb. 2025
TwoSheep.io *Remote*
- Shipped frontend and backend features across React and Node.js for a production web application serving **500+ daily active users**.
- Optimized backend database queries, reducing data retrieval time by **20%** and improving performance for frequently accessed user-facing pages.

Projects

NBA Game Outcome Predictor | *Python, scikit-learn, Pandas, Flask, React, PostgreSQL*
- Built an end-to-end machine learning application using **25,000+ NBA games**, engineering rolling team performance, rest-day, and home-court advantage features.
- Evaluated logistic regression, random forest, and XGBoost models using cross-validation, achieving approximately **66% test accuracy** on game outcome predictions.
- Developed a Flask REST API and React frontend for interactive matchup predictions, allowing users to request predictions and view estimated win probabilities.

Event Attendance Management System | *Java, Firebase, Android Studio*
- Built a Java Android event management application with Firebase-backed CRUD operations for user registration, event creation, attendance tracking, and role-based administration.
